### Multiple Sclerosis: To B or not to B?

Multiple sclerosis (MS) is a debilitating disease whereby immune cells attack the central nervous system causing disability. Significant clinical benefit has been observed when immune cells called "B-lymphocytes" are eliminated in MS patients using immunotherapies. The team's research goal is to unravel why this is the case. Join us as they discuss this new and exciting frontier in MS research.

**Dr. Amit Bar-Or**  
neurologist and professor

**Dr. Jennifer Gommerman**  
associate professor

**Dr. Alexandre Prat**  
neurologist and professor

**Dr. Scott Dunham**  
volunteer and person with MS

Moderator: **Dr. Andreas Laupacis**  
professor, Institute of Health Policy
